

Report of Examination of Alaska Salmon Stream.

Name of Stream. Donkey Bay.

Date examined. Throughout season.

Location. Head of Donkey Bay, an Inlet on the West side of Pybus Bay between South Inlet and the Head of Pybus Bay.

Approximate length. 4 miles. Depth 20 inches. Width 20 feet.

Condition, etc. Average (up to July 10th. High (July 10 to 22) Average (July 22 to 31) Low (August 1 to 13)

Salmon run Light.

Date and duration of run. Dogs (July 1st and some still coming in August 12. Humpies (August 6th         ) but few have reached spawning beds on account of low water.

Estimated No. etc. "Dogs" about 12,000. Humpies 1500.

Former size of runs Only information obtainable was to effect that creek ordinarily had a total of about 20,000 fish (all species)

Natural barriers. Some 4 or 5 natural barriers in first 2 miles which ought to be removed and could be without very much trouble, unimportant except when water is below normal.

Where markers are placed. Right hand marker on point about 500 yards from Creek mouth, left hand marker is about 700 yards from creek mouth and just inside of a point.

James J. Lewis (signed)

Stream Watchman.
